Orelius investor deck

Sources and formula-development brief

This document supports `deck/orelius.html`. It records the source, evidence type, and limitation behind each material statement. Access date: **12 September 2026**, unless a source date is stated otherwise.

Evidence convention

- **Verified**: official current source, regulator, stored primary transcript, or reproducible local model.
- **Benchmark / assumption**: planning input, not a claim about Orelius.
- **Proposed target**: requires formulation, testing, and commercial validation.
- **Open diligence**: requires an external professional or internal proof before use.

Slide-by-slide sources

The final HTML deck contains 20 slides. During design, one planned transition slide was removed; the narrative and source records below retain their working sequence so the evidence trail remains intact. Match by slide title rather than the printed section number where the two differ.

1. ORELIUS

Proposed target. Orelius is a proposed India-first daily-nutrition brand. The deck does not assert an existing market launch, final formula, FSSAI approval, or confirmed trademark.

2. THE ADHERENCE PROBLEM

Inference. The deck synthesises the convenience language used by official brand pages and the global product format. It does not assert a quantified India-wide pill-fatigue rate. [Grüns](#); [Man Matters](#); [Be Bodywise](#).

3. GRÜNS: PUBLIC REFERENCE PRODUCT

Verified. One 20g daily pack; 28 packs; 50 kcal; 15g carbohydrate; 6g fibre; 8g added sugar; 20+ vitamins/minerals; 8.7g Core Nutrients Blend; pectin base. [Grüns product page](#).

4. INDIA NEEDS A DIFFERENT PRODUCT

Verified / inference. Grüns' public label carries 8g added sugar and an eight-gummy serving. Man Matters specifies two gummies/day and Be Bodywise one gummy/day. The lower-count Orelus design is a proposal based on these observed norms, not a proven consumer preference. [Grüns](#); [Man Matters](#); [Be Bodywise](#).

5. INDIA FEASIBILITY

Verified transcript evidence. Mosaic founder Revant Bhate says the VMS market is below ₹10,000 crore. The conditional feasibility conclusion is analyst judgment. [video-research/transcripts/decoding_d2c_revant_bhate_full.txt](#), lines 911–920.

6. COMPETITION: WHAT EACH BRAND PROVES

Verified. Mosaic confirms Man Matters, Be Bodywise and Little Joys as portfolio brands. [Mosaic Wellness](#). Man Matters: 60 gummies/₹749/two daily. [Man Matters](#). Be Bodywise: ₹699/one daily/no added refined sugar. [Be Bodywise](#). Siens: Dabur's premium D2C supplement entry, 2025. [Dabur](#). Little Joys: age-specific gummies and batch-quality communication. [Little Joys](#). Kapiva: ₹999/60 Shilajit gummies, one daily and NABL-report claim. [Kapiva](#).

7. THE COMPETITIVE OPENING

Inference. The cited current brand pages support targeted, concern-specific propositions. The assertion that an evidence-first daily-nutrition ritual is an available opening is a research inference, not a census of every Indian SKU.

8. ORELIUS POSITIONING

Proposed target. Positioning: "daily nutrition made credible and convenient for India." This is a strategic choice, not a verified claim.

9. PRODUCT TARGET PROFILE

Proposed target. Three to five pectin gummies/day; low/no added sugar target; 7-day trial pack and 28-day replenishment pack; declared active amounts; no claim that this is final or approved.

10. FORMULA LOGIC

Verified benchmark / proposed target. Grüns' public label combines vitamins/minerals, fibre/prebiotic, and a broad food/botanical blend. Orelus proposes transparent amounts, a more limited and meaningful blend, and finished-product testing. [Grüns](#).

11. DEVELOPMENT GATES

Open diligence. Ingredient eligibility, permitted levels, shelf-life, stability, microbiology, contaminants, and claim wording require finished-product work and qualified regulatory review. [FSSAI Health Supplements](#); [FSSAI 2022 operationalised framework](#).

12. TRUST SYSTEM

Verified benchmark / proposed target. Little Joys describes third-party heavy-metal testing and report access. Kapiva says its Shilajit gummy carries an NABL report. Orelus' lot-specific finished-product reports remain a proposed system. [Little Joys](#); [Kapiva](#).

13. AUDIENCE AND OCCASION

Proposed target. India 18–35, time-poor consumers who want convenient nutrition. No population-size statistic is asserted. The initial customer research plan tests convenience, taste, trust, and repurchase rather than treating intent as purchase.

14. GO-TO-MARKET

Benchmark / proposed target. D2C and Amazon first; prepaid incentives; creator learning loop; later quick-commerce discovery. The source report contains the modelled/order-level rationale. `strategy.md`, Part F5 and Part G3.

15. RETENTION GATE

Verified transcript evidence / proposed decision rule. Aarti Gill's statement: scaled Indian adult-nutrition brands saw a maximum of two boxes/year. The $\geq 35\%$ Month-2/3 gate is a proposed investment control, not an industry statistic. `video-research/transcripts/oziva_aarti_gill_neonshow_full.txt`, lines 865–892; `strategy.md`, Part G7.

16. UNIT ECONOMICS

Benchmark / assumption. AOV ₹699; contribution margin before marketing ₹370–420; CAC ₹350–600. These are model inputs, not Orelus results. `strategy.md`, Part F5.

17. FINANCIAL SCENARIOS

Verified model output. Fresh local run of `model/cohort_model.py` on 12 Sep 2026: ₹50L minimum cash falls negative; ₹2Cr reaches ~₹5.5Cr month-36 annualised run-rate; ₹5Cr reaches ~₹20.8Cr under the optimistic curve. The India-repeat stress test in `strategy.md` Part G7 produces ~₹1.45Cr for the ₹5Cr scenario. The stress test does not use audited Orelus data.

18. CAPITAL LOGIC

Analytical judgment. Release larger growth capital only when the final formula, quality system, first-order contribution, prepaid mix, and retention gate are proven. This avoids presenting a capital input as a substitute for product-market fit.

19. RISKS AND CONTROLS

Verified/open diligence. FSSAI framework: disease claims sit outside the category unless specifically permitted. [FSSAI framework](#). ASCI: paid/incentivised influencer promotion requires disclosure and technical health advice needs relevant qualifications. [ASCI](#). GST, trademark, and non-WHO-GMP certification are open diligence items. `strategy.md`, Parts F4b and H0.

20. INVESTMENT THESIS

Analytical judgment. The deck recommends a controlled validation investment, not an immediate India-only billion-dollar outcome. The conclusion follows from the competitor, founder-transcript, regulatory, and model evidence above.

Formula-development brief for Softpills and regulatory review

PRODUCT INTENT

Create a vegetarian pectin daily-nutrition gummy for Indian adults. The goal is habitual convenience without representing the product as a replacement for a varied diet, vegetables, a medical treatment, or a formula-equivalent version of Grüns.

REFERENCE AND BOUNDARIES

Public Grüns category	Orelus development response	Boundary
Vitamins and minerals	Select permitted micronutrients with transparent finished-product label amounts	Do not transplant Grüns percentages or US Daily Values into India.
Fibre and prebiotic	Evaluate a tolerable, stable fibre/prebiotic system	Establish gastrointestinal tolerance and labelling after formulator review.
Fruit/vegetable/botanical blend	Use a limited, traceable blend only where ingredient eligibility and meaningful dosage are demonstrated	Do not hide negligible quantities inside a large marketing blend.
Pectin base	Develop a pectin matrix compatible with shelf-life and sensory objectives	Finished-product stability testing defines performance.
Sweetness	Prioritise no added sugar or low added sugar without misleading “sugar-free” language	Validate the actual nutrition panel and legal definition.

REQUIRED TECHNICAL PACKAGE

1. Master formula and supplier specification for every raw material.
2. Regulatory eligibility and permitted-level review for the intended adult population.
3. Pilot-batch sensory, texture, and packaging trials.
4. Active assay and stability protocol at release, interim, and end-of-shelf-life points.
5. Microbiological, heavy-metal, and contaminant plan for every finished batch.
6. Pack label, claims matrix, warnings, use instructions, and a review trail.
7. Consumer test protocol that measures reorder intent and actual second-order behaviour separately.

Research methods and limitations

Composio Search and Fetch URL Content supported current-source discovery and official-page extraction. Tavily supplied a second independent search pass. The deck treats commercial market reports as secondary source candidates and does not use their headline market-size forecasts to override first-party/transcript limitations. `yt-transcript` and `yt-video-ask` remain available for a targeted video question but were not used to manufacture evidence where official sources already provided the relevant claim.

Mandatory pre-circulation checks

1. Human-supervised trademark clearance for Orelius in relevant Indian classes.
2. Exact final product GST/HSN advice.
3. Certificate pack for all manufacturing claims beyond Sanode's publicly stated WHO-GMP.
4. Finished Orelius formula, nutrition panel, and claims approval by the appropriate food/regulatory professionals.
5. Finished-product lab results before "lab tested," "heat stable," or any specific quality assertion enters external material.
