India Gummy Wellness — Pitch Deck Outline

A slide-by-slide outline built from the full research report (`strategy.md` / `India_Gummy_Wellness_Strategy.pdf`), condensed for a founder/investor-facing deck. Each # below is one slide — designed for direct transfer into PowerPoint/Keynote/Figma. Speaker notes are in italics under each slide. Every number here is sourced in the full report; cite it there if challenged.

Slide 1 — Title

[Brand name — NOT YET FINAL. “Aureliz” is confirmed dead (it’s the live brand of an operating Singapore AI company — drop it). Of the remaining 13 Sep shortlist (Orelus / Bite It / Eat Roz / Just Chew), only Eat Roz’s .com domain is free, and even that sits close to an existing Indian snack brand (“Rozeat”). Realistically this shortlist needs another round. Do not finalize branding/packaging until a real availability + trademark check is done. See `strategy.md` Part I3.] *Daily nutrition, reinvented for how India actually eats.*

Sanode Healthcare x Softpills Lifesciences — Ahmedabad

Speaker note: keep this slide to name, tagline, and manufacturing pedigree. No numbers yet.

Slide 2 — The insight

Grüns didn't invent a nutrient. It invented a format — and sold to Unilever for \$1.2B in 32 months.

- 8 gummies/day replacing a chalky greens-powder shaker
- Profitable by month 14, on \$45–55M raised total
- Reached \$300M+ ARR before exit; 1M+ customers, 10M gummies/day

Speaker note: this slide exists to earn 90 seconds of attention. Don't over-explain — the next slide is the pivot to “but not like this, not here.”

Slide 3 — Why the literal playbook doesn't transplant

	Grüns (US)	India reality
Price	~₹150–250/day	₹15–35/day (category ceiling)
Sugar	8g added sugar/serving	237M diabetic/prediabetic; category norm is zero-sugar
Format	8 gummies/day	No Indian brand doses above 1–2/day
Exit precedent	\$1.2B is real	No Indian nutraceutical brand has ever reached \$1B exit scale

Speaker note: this is the credibility slide. Showing you know exactly why the obvious play fails is what earns the room's trust for the next 15 slides.

Slide 4 — The honest bar, stated up front

Self-funded, India-only, gets you to \$70–250M (₹150–400 Cr revenue at a 4–6x strategic exit multiple) — not the full \$1B/\$500M ARR ambition.

Reaching that bar needs two stages:

1. India-first, capital-efficient, self-funded proof (Years 1–2)
2. A funded export/international stage — GCC first, then possibly US/UK — once retention is proven (Year 2+)

Speaker note: say this before anyone else in the room does the math and catches you overclaiming. It is the single most credibility-building slide in the deck.

Slide 5 — The white space, precisely

No Indian brand occupies: lifestyle-branded, multi-benefit, daily-ritual nutrition, in gummy form, at ₹40–70/day.

- Supply6 (powder sachet) and Wellbeing Nutrition (effervescent) occupy this price/positioning band — just not in gummies
- Supply6 raised its round from **Unilever Ventures** in July 2026 — the same Unilever that bought Grüns
- The one Indian brand that tried gummies-as-the-category (Power Gummies) collapsed 80% and sold its assets in distress — because it had no credibility layer, not because gummies don't work
- **Correction (13 Sep): there IS a live direct competitor in this exact space — BiteBella** (Surat, Gujarat), already selling “Super Green Gummies” at ₹449 with 3,703 reviews at 4.8/5, founded by three doctors. Not a blue ocean — plan and pitch as direct positioning against a real, credible player, the same way this deck already positions against Man Matters/Siens.

Speaker note: Unilever Ventures backing Supply6 is still your best borrowed-credibility data point — but don't claim “no competitor” anymore. BiteBella is real and needs to be named and addressed directly if asked.

Slide 6 — Product

A multi-gummy daily ritual, built for India from the ground up — not a Grüns clone.

- 3–5 gummies/day (not 8) — matches Indian portion norms and cost structure
- Zero/low added sugar by default — category table stakes, not a differentiator to skip
- **60°C heat-stable pectin base — the single unclaimed claim in this entire category**, Indian or global
- NABL lab report in every pack, from day one — pre-empts the “candy dressed as vitamins” critique that hit Grüns itself
- **Critical update (13 Sep): “genuinely all-in-one” and “3 gummies” are in tension.** AG1’s own CEO stated publicly their full formula needs 15 gummies — their simplified version still needs 8. State explicitly what’s included and what’s deliberately cut for a 3-gummy format; don’t market “all-in-one” without naming the tradeoff, or this claim will get challenged by anyone who knows the category.

Speaker note: the heat-stability claim is real and independently evidenced (GCC trade press documents gelatin gummies failing above 27-35°C against 43°C+ Gulf summer temps) — use it as the headline technical differentiator, every time. The ingredient-list tradeoff above is now the single most important thing to have a crisp answer for if asked.

Slide 7 — Positioning

Modern daily nutrition, backed by lab reports — for people who skip vitamins because pills are boring.

Sits between Kapiva's Ayurvedic-heritage tone and Wellbeing's design-led premium tone. Never:

- Candy-first with no credibility layer (Power Gummies' failure)
- Disease-adjacent or GLP-1-companion language (not legally available under FSSAI/ASCI; drew public backlash when The Good Bug tried it in 2025)

Speaker note: this slide is here to preempt the “so is this just Grüns-but-Indian” question with a real point of view.

Slide 8 — Manufacturing moat

Sanode (WHO-GMP) + Softpills (pectin/sachet CDMO) = a real cost and speed advantage most competitors don't have.

- Pectin + heat-stability is genuinely hard to replicate quickly
- Directly satisfies SFDA's (Saudi) documentary requirements for export — a real speed advantage into GCC later
- *[Action item before this slide goes in front of investors: confirm current ISO 22000 / HACCP / Halal / US FDA registration status directly — verified certificate number, issuer, scope, expiry]*

Speaker note: do not present unverified certifications as fact in a fundraising deck — confirm them first. This is flagged explicitly in the full report (Part H0).

Slide 9 — The Indian competitive landscape

Every serious player validates a piece of this thesis — none has assembled the whole thing.

Brand	Proves
Mosaic Wellness (₹736 Cr)	Consult/retention loop drives repeat
Plix (₹864 Cr, fastest grower)	One hero format + mass reach wins
HealthKart (₹1,313 Cr, profitable)	House-of-brands + owned distribution is the capital-efficient path
Wellbeing Nutrition	Premium, no-discount, “daily greens” positioning works in India
Supply6	The foundational-nutrition thesis specifically, Unilever-backed
Power Gummies (collapsed)	Gummies alone, with no system around them, fail
BiteBella (Surat, Gujarat)	A real, live direct competitor already exists — doctor-founded, 4.5-4.9★ across 1,200-5,200+ reviews per SKU, already runs two-way AM/PM bundles

Speaker note: this slide does double duty — competitive landscape AND validation that every piece of the strategy has independent proof.

Slide 10 — Go-to-market

D2C-first, prepaid-biased — not ad-spend-led.

Note (13 Sep): the actual founders decided in their own strategy meeting to hold subscription back at launch — they weren't confident the Indian audience is ready for recurring billing in this category yet. That's a reasonable, evidence-consistent call (this report has separately flagged that "subscribe and save" isn't a proven Indian retention mechanic on its own — see the LinkedIn operator quote in the main report's most recent research round). Update this slide's headline to drop "subscription from day one" and treat subscription as something to introduce once the product itself proves repeat purchase, not a launch-day requirement.

1. **Phase 0 (Mo 1–4):** Formulation + FSSAI Relabeller licence + NABL partner + D2C site + Amazon (0% referral fee under ₹1,000)
2. **Phase 1 (Mo 4–12):** Prove retention $\geq 35\%$ at month 2–3 before scaling spend. One hero SKU. Nano/micro creator pipeline (₹8K–80K/deliverable), not celebrity-tier.
3. **Phase 2 (Year 2):** Quick commerce for trial (~₹5–10L launch cost), second SKU (effervescent, hedges format risk)
4. **Phase 3 (Mo 18–24):** Raise, once retention is proven — not year 3, whenever the metric clears

Speaker note: month-2/3 retention $\geq 35\%$ is the single load-bearing number in this entire plan. Say that explicitly.

Slide 11 — Unit economics

	Per order
AOV	₹699
Contribution margin (before marketing)	₹370–420 (60–70%)
CAC	₹350–600
Payback	2nd–3rd order

Real, computed 36-month cohort model backs this up — see appendix.

Speaker note: don't over-promise precision here — these are modeled, not audited, numbers. Say so if asked.

Slide 12 — The financial model (computed, not estimated)

Self-funded capital realistically produces ₹5–20 Cr revenue by year 3 — a real, profitable proof point, not acquisition scale.

Capital committed	Month-36 run-rate
₹2 Cr	~₹5.5 Cr
₹5 Cr	~₹15–20 Cr (base case) to ~₹1.5 Cr (if Indian repeat purchase tracks OZiva's own disclosed "2 boxes/year" benchmark rather than the US curve)
₹65 Cr (funded, for comparison)	~₹280 Cr

Speaker note: the wide range in the ₹5 Cr row is the single most important sensitivity in the whole model — retention, not CAC or price, is what determines which of these businesses you're actually running. Don't hide this range; it's the thing a sophisticated investor will ask about first, and having already modeled it is the strongest possible answer.

Slide 13 — Risks, ranked

1. Price ceiling / revenue-per-customer gap vs. Grüns (need 6–10x the customers for equivalent revenue)
2. CAC inflation + quick-commerce dependence (30–45% all-in take)
3. FSSAI/ASCI claims discipline (52% of FY26 F&B ad violations were nutraceuticals)
4. Sugar/diabetes sensitivity (237M diabetic/prediabetic Indians)
5. Fast-follower risk — HUL, Marico, USV, Dabur can all launch a competing pectin gummy quickly
6. Retention is the whole game (Slide 12) — everything else is secondary to proving this number

Speaker note: naming your own risks, ranked, unprompted, is worth more credibility than any single growth number in this deck.

Slide 14 — The ask

Phase 0–1: [₹X Cr] self-funded / Sanode-backed, 12–18 months, to prove retention $\geq 35\%$ and reach ~₹5–20 Cr run-rate.

Then: a ₹40–70 Cr raise (Series A-equivalent, in line with what Mosaic's and Plix's own backers provided) to fund Phase 2–3 and the export-led path to the full ambition.

Speaker note: fill in the actual [₹X Cr] once the founders confirm their real Phase 0-1 commitment — Part G7 of the full report gives three concrete scenarios (₹50L / ₹2 Cr / ₹5 Cr) to choose from.

Slide 15 — Roadmap

- **Year 1:** Launch, prove retention, one hero SKU, D2C + Amazon
- **Year 2:** Quick commerce, second SKU, raise triggered by retention proof
- **Year 3:** Retail/pharmacy expansion, ₹150–400 Cr trajectory (funded)
- **Year 3+:** GCC export (heat-stability wedge, real regulatory advantage via existing certifications), possible US/UK DTC

Speaker note: this is the only slide that shows the full 5-year ambition — everything before it has been about the credible, provable first steps.

Appendix slides (backup, not core deck)

- A2: Full Grüns product/label breakdown
- A3: Full unit-economics model output (all three scenarios, full monthly detail)
- A4: Full Indian competitor teardown table (10+ brands)
- A5: FSSAI/GST/Legal Metrology compliance checklist
- A6: GCC regulatory pathway + price comparables (for the Stage 2 conversation)
- A7: Brand naming shortlist + domain availability + trademark-search action item

Design notes for whoever builds this in Figma/PowerPoint: keep the tone evidence-led, not hype-led — the deck's actual competitive advantage over a typical pitch is that every claim is backed by a specific, checkable source. Consider a visible "Sourced" footnote convention on data slides (Slides 3, 5, 9, 11, 12, 13) linking back to the full report. Favor the report's own restraint (Slide 4's honest bar) as the emotional hook, not a false \$1B promise upfront — investors who've seen enough decks will trust the one that corrects itself before they have to.
